## DETAILED ACTION

1. Applicant's amendment of August 8, 2003 is acknowledged and entered as paper number 18.
2. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 9, 19, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Marantz.

The patent to Marantz shows a nozzle for a burner, the nozzle comprising:

- a body having a first end adapted to attach to the burner and a second end;
- a first tube (see Figure 6);
- a first tube 40 extending through the body, the first tube having a first inlet on the first end of the body and a first outlet on the second end of the body; and
- a second tube 32 extending through the body, the second tube having a second inlet on the first end of the body and a second outlet on the second end of the body;
- wherein the first tube and the second tube are separate along a substantial length of the body;

- wherein the first tube 40 includes a first linear section connected to the first inlet and a second linear section connected to the first outlet, the second linear section being provided at a predetermined angle in relation to the first linear section (see Figure 6);
- wherein the first tube maintains a constant cross-sectional area over entire length thereof (see Figure 6);
- a third tube 20 wherein the first, second, and third tubes are separate along an entire length of the body as recited in claims 3 and 4;
- wherein the second tube is linear along an entire length thereof as recited in claim 9.

5. Claims 13-16, 18-20, 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Marantz.

The patent to Marantz shows a nozzle for a burner, the nozzle comprising:

- a body having a first end adapted to attach to the burner and a second end, the first end having a plurality of inlet holes and the second end having a plurality of outlet holes, each inlet hole being connected to a single outlet hole by a linear separate tube, wherein all of the separate tubes 40, 32, and 22 in the body extend along a common plane, since each of the separate tubes are annular and surround each other respectively, wherein separate tube 40 includes a first linear section and a second linear section being provided at a predetermined angle as recited in claim 15 and tube 32 is linear along an entire length as recited in claim 16.

*Allowable Subject Matter*

Art Unit: 3752

6. Claims 5 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 11, 17, and 23 are allowed over the prior art.
